INDIVIDUAL REFLECTION W5

ANTON OLSSON

19-10-06

**THIS WEEK I CONTINUED** working on the main screen GUI and business logic. After discussions within the group, we've decided to go for a design approach of small fragments instead of activities and my classes had to be refactored accordingly. This also meant fragments should be loaded dynamically, something I struggled to implement for the Google Maps fragment, and this stalled me a bit mid-week. However, the last days I've been really productive, and the steep learning curve of just start making an app really pushes you to learn a lot in short time. I've also helped my team members with their deliveries a bit, by helping them out during meetings and over Slack.

**AS FOR WHAT I COULD IMPROVE:** since I have a "graphics background" of sorts, I tend to get stuck doing frontend/GUI:s - and paying great detail to them - during these sorts of projects. This isn't really vertical development, and it makes the overall development slower. I'll try to be less of a graphical perfectionist in the coming weeks. I've also been a little sloppy of commenting my code. Henceforth, I aim to not committing any new code before relevant comments are applied.
