

Individual Reflection

Jonathan Örgård

2019-10-13

This week I have contributed to the team's application of scrum by continuing to write tasks on our scrum board and keeping my cards updates so my team knows what I'm doing. This is something we have been lazy with before but now I think people keep there cards up to date most of the time.

This week I have contributed to the team's deliveries by adding more Västtrafik API call methods and making a parser that return matching stops in the form of a Location (name, stopId and coordinates) for a given string using Västtrafiks API. I have also worked on getting OAuth working with Västtrafik so that we can have permanent authentication, had some problems with this since Västtrafik doesn't follow the standard for OAuth and instead choice to change it slightly. Managed to solve this and some other problems (i.e. Västtrafik not following their own JSON model schema sometimes...).

I have had a lot of problems with Västtrafik not following standards, both their own ones and once made by others. This has led to me realizing that I have to test more fringe stuff in other to make sure my code works in outlier scenarios.

I feel that in this course I have mostly worked on getting stuff ready that other people are waiting on which have meant that I sometimes have blocked other peoples work for a few days. In the future I think I should start to try to predict what other people need using our scrum board and try to get work started before they even get that tasks so that they can do it without having to wait for another part to be completed.
